

EU collaboration on chronic diseases: One year on

(Brussels, 18 February 2015)

Policy makers and experts from across the EU meet in Brussels on 19 February 2015 to discuss progress made since the launch of the *Joint Action on Chronic Diseases and Promoting Healthy Ageing across the Life Cycle* (JA-CHRODIS) a year ago. The Joint Action provides EU Member States with a unique opportunity to learn from each other and strengthen their capacities to prevent, manage and treat chronic disease.

On 19 February, the full JA-CHRODIS consortium, involving representatives of 63 organisations like national departments of health, regional health authorities and research bodies across the EU as well as EC representatives will come together in their first General Assembly. At this event, entitled “*Towards good practices in prevention and care of chronic diseases, for a healthier tomorrow*”, the consortium will discuss achievements to date and upcoming work. External parties that are interested in learning about the content of JA-CHRODIS and how they can contribute are invited to join the Stakeholder Forum that will take place following the General Assembly.

EUREGHA is a partner in the CHRODIS Joint Action to contribute to exchange of good practices in health promotion and prevention of chronic diseases, and to identify innovative regional and local approaches to treating chronic diseases in Europe.

The European Commission (DG SANTE) and associated European governments are collectively investing almost 10 million Euro in JA-CHRODIS, which aims to identify and share the best approaches to reduce the burden of chronic disease in the EU. The focus of JA-CHRODIS is on promoting health by addressing the underlying risk factors that can lead to chronic disease, and on identifying comprehensive and effective care paths for people with diabetes or that are suffering from more than one chronic condition. Joint Action outcomes can therefore contribute to supporting integrated, whole-of-health-systems approaches to reducing the burden of chronic diseases in Europe.

Juan Riese, co-ordinator of JA-CHRODIS, states: “*The JA-CHRODIS events are important milestones to set the course of the Joint Action and the contribution it makes to reducing chronic diseases in the EU and the toll they take on the lives of individuals and on health and social systems.*”

The fact that this is the largest Joint Action that has been financed under the EU Public Health Programme to date reflects the importance of this topic to the European Commission and participating countries.

Notes to editors:

- (1) Joint Actions are one funding instrument under the third EU Health Programme 2014-2020. They have a clear EU added value and are co-financed either by competent authorities that are responsible for health in the Member States or in the third countries participating in the Programme, or by public sector bodies and non-governmental bodies mandated by those competent authorities. These actions should provide a genuine European dimension to address the priorities at hand. Depending on the scope of the action Joint Actions involve on average 25 partners.
 - (2) 38 government departments, institutes and other organisations from 13 EU Member States as well as Norway and Iceland and 5 EU-level organisations are taking part in JA-CHRODIS as associated partners, which means that they are financially implicated in the Joint Action. 29 government departments and other organisations from 11 more EU Member States are involved as collaborating partners.
